

New Program Shortens Treating Time for Major Waste Management Client

Area
Kindersley

PureChem Products
DM-308 and WC-608

Challenge

The customer needed a faster and more effective treatment for cleaning their slop oil tank to meet pipeline specifications.

The variety of oils and percentage of solids contained in the fluid was abundant and challenging.

Existing program was taking 7 to 14 days to treat the system thus impacting production capacity.

Solution

PureChem Services performed extensive bottle testing on a variety of fluids entering the plant and designed a new program to more efficiently treat the system

DM-308 was used to treat the tank and WC-608 was also batched into the tank.

Benefit

Treatment time was reduced down to 1 to 3 days and clean oil was available for sale.

The new program optimized the customer's facility allowing for an increase in the volume of slop oil they could process and having a positive impact on the operations to the value of **\$250,000** a year.
